

## Define Research Scope

What do you want to learn more about? Instead of directing your research toward people, pick something that you want to learn specifically about.

## Find Related People

Who can you talk to to get the information that you want? Only think about this after you have defined what you want to learn from them.

## Define Methods

How will you go about getting the information you want? Even if you don't know what information you want, how will you go about finding out what information you want?

Directed Research Plan		Project
<b>Area of Exploration</b> What specifically do you wish to learn more about?		
<b>People of Interest</b> Who are you going to research to understand your area of exploration?		
<b>Research Map</b> What methods are you going to use? What do you want to ask them?

## Why

This worksheet allows you to be deliberate in applying the knowledge you gain from your previous research and testing to a second iteration of research to answer new questions that arose.

## What came before?

- Observation
- Contextual Inquiry
- Usability Testing
- Interview
- Domain Research

## What's next?

- Observation
- Contextual Inquiry
- Interview
- Domain Research

## Tips

Use this after you have already done some research, and know specific areas that you want to understand more.

Use this frequently in order to dig deeper as you learn more and more.

## Area of Exploration

What specifically do you wish to learn more about?

## People of Interest

Who are you going to research to understand your area of exploration?

## Research Map

What methods are you going to use? What do you want to ask them?
